

Git

The Git workflow as a first-class citizen, without a terminal.

File history

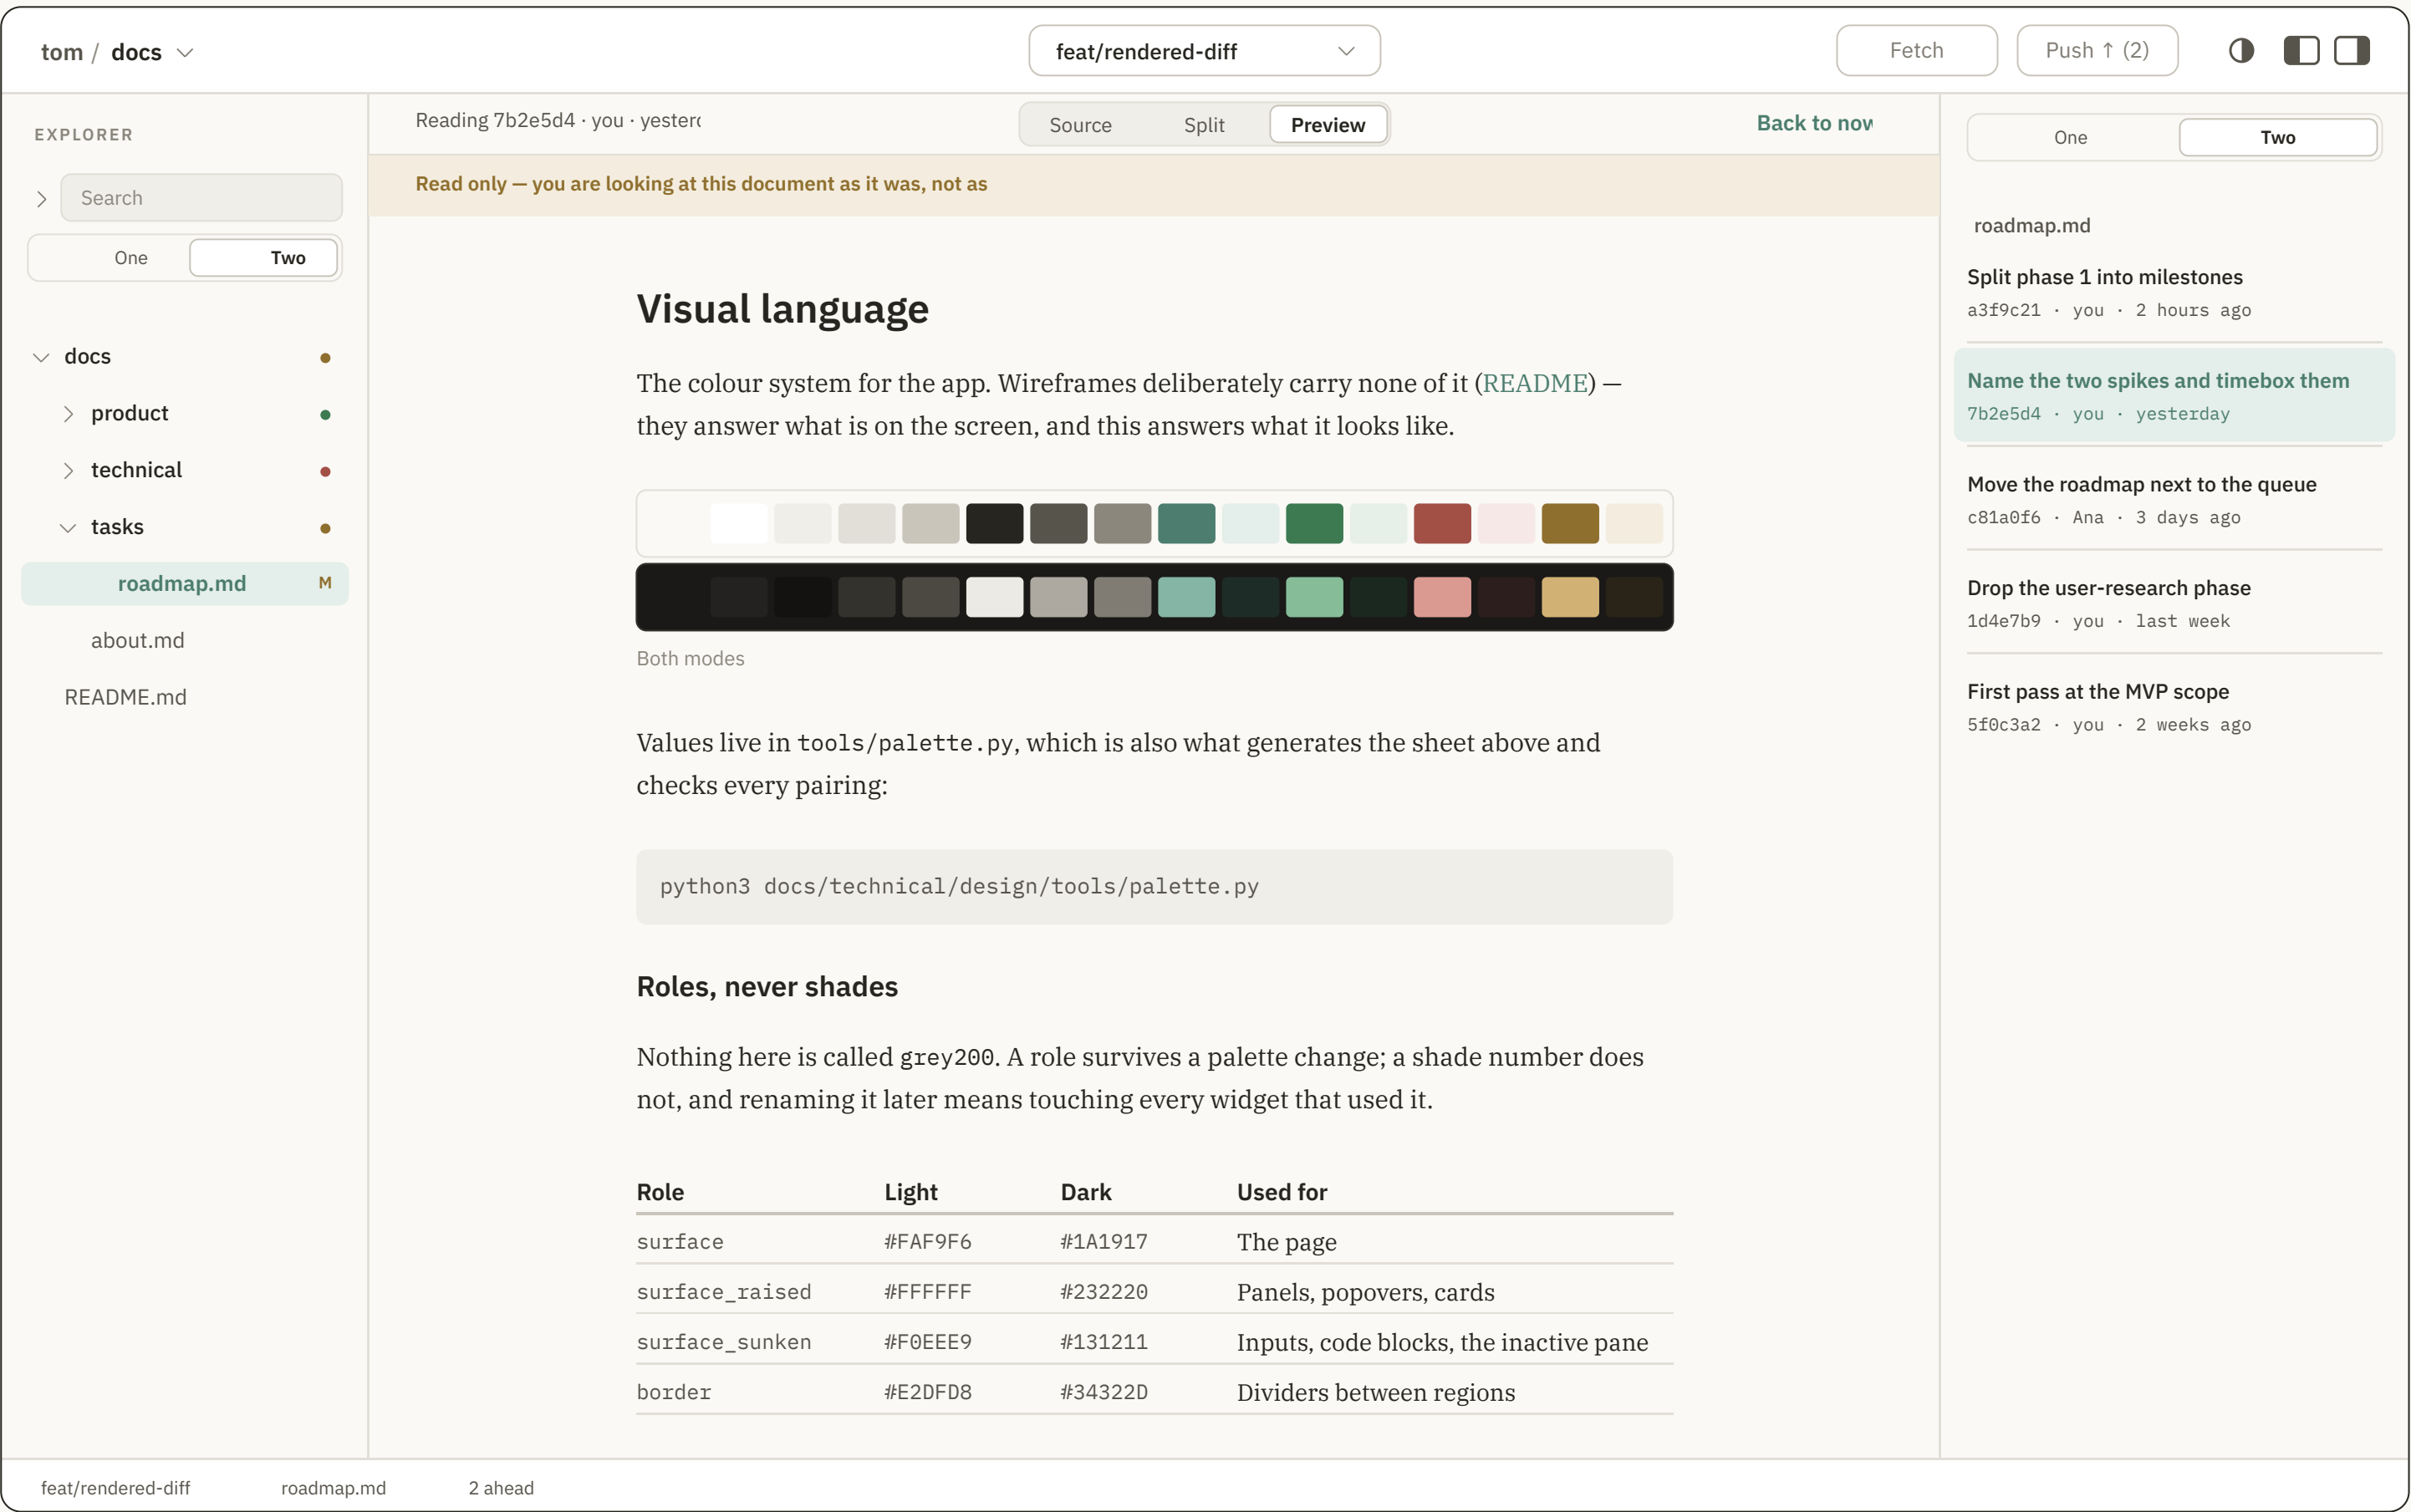

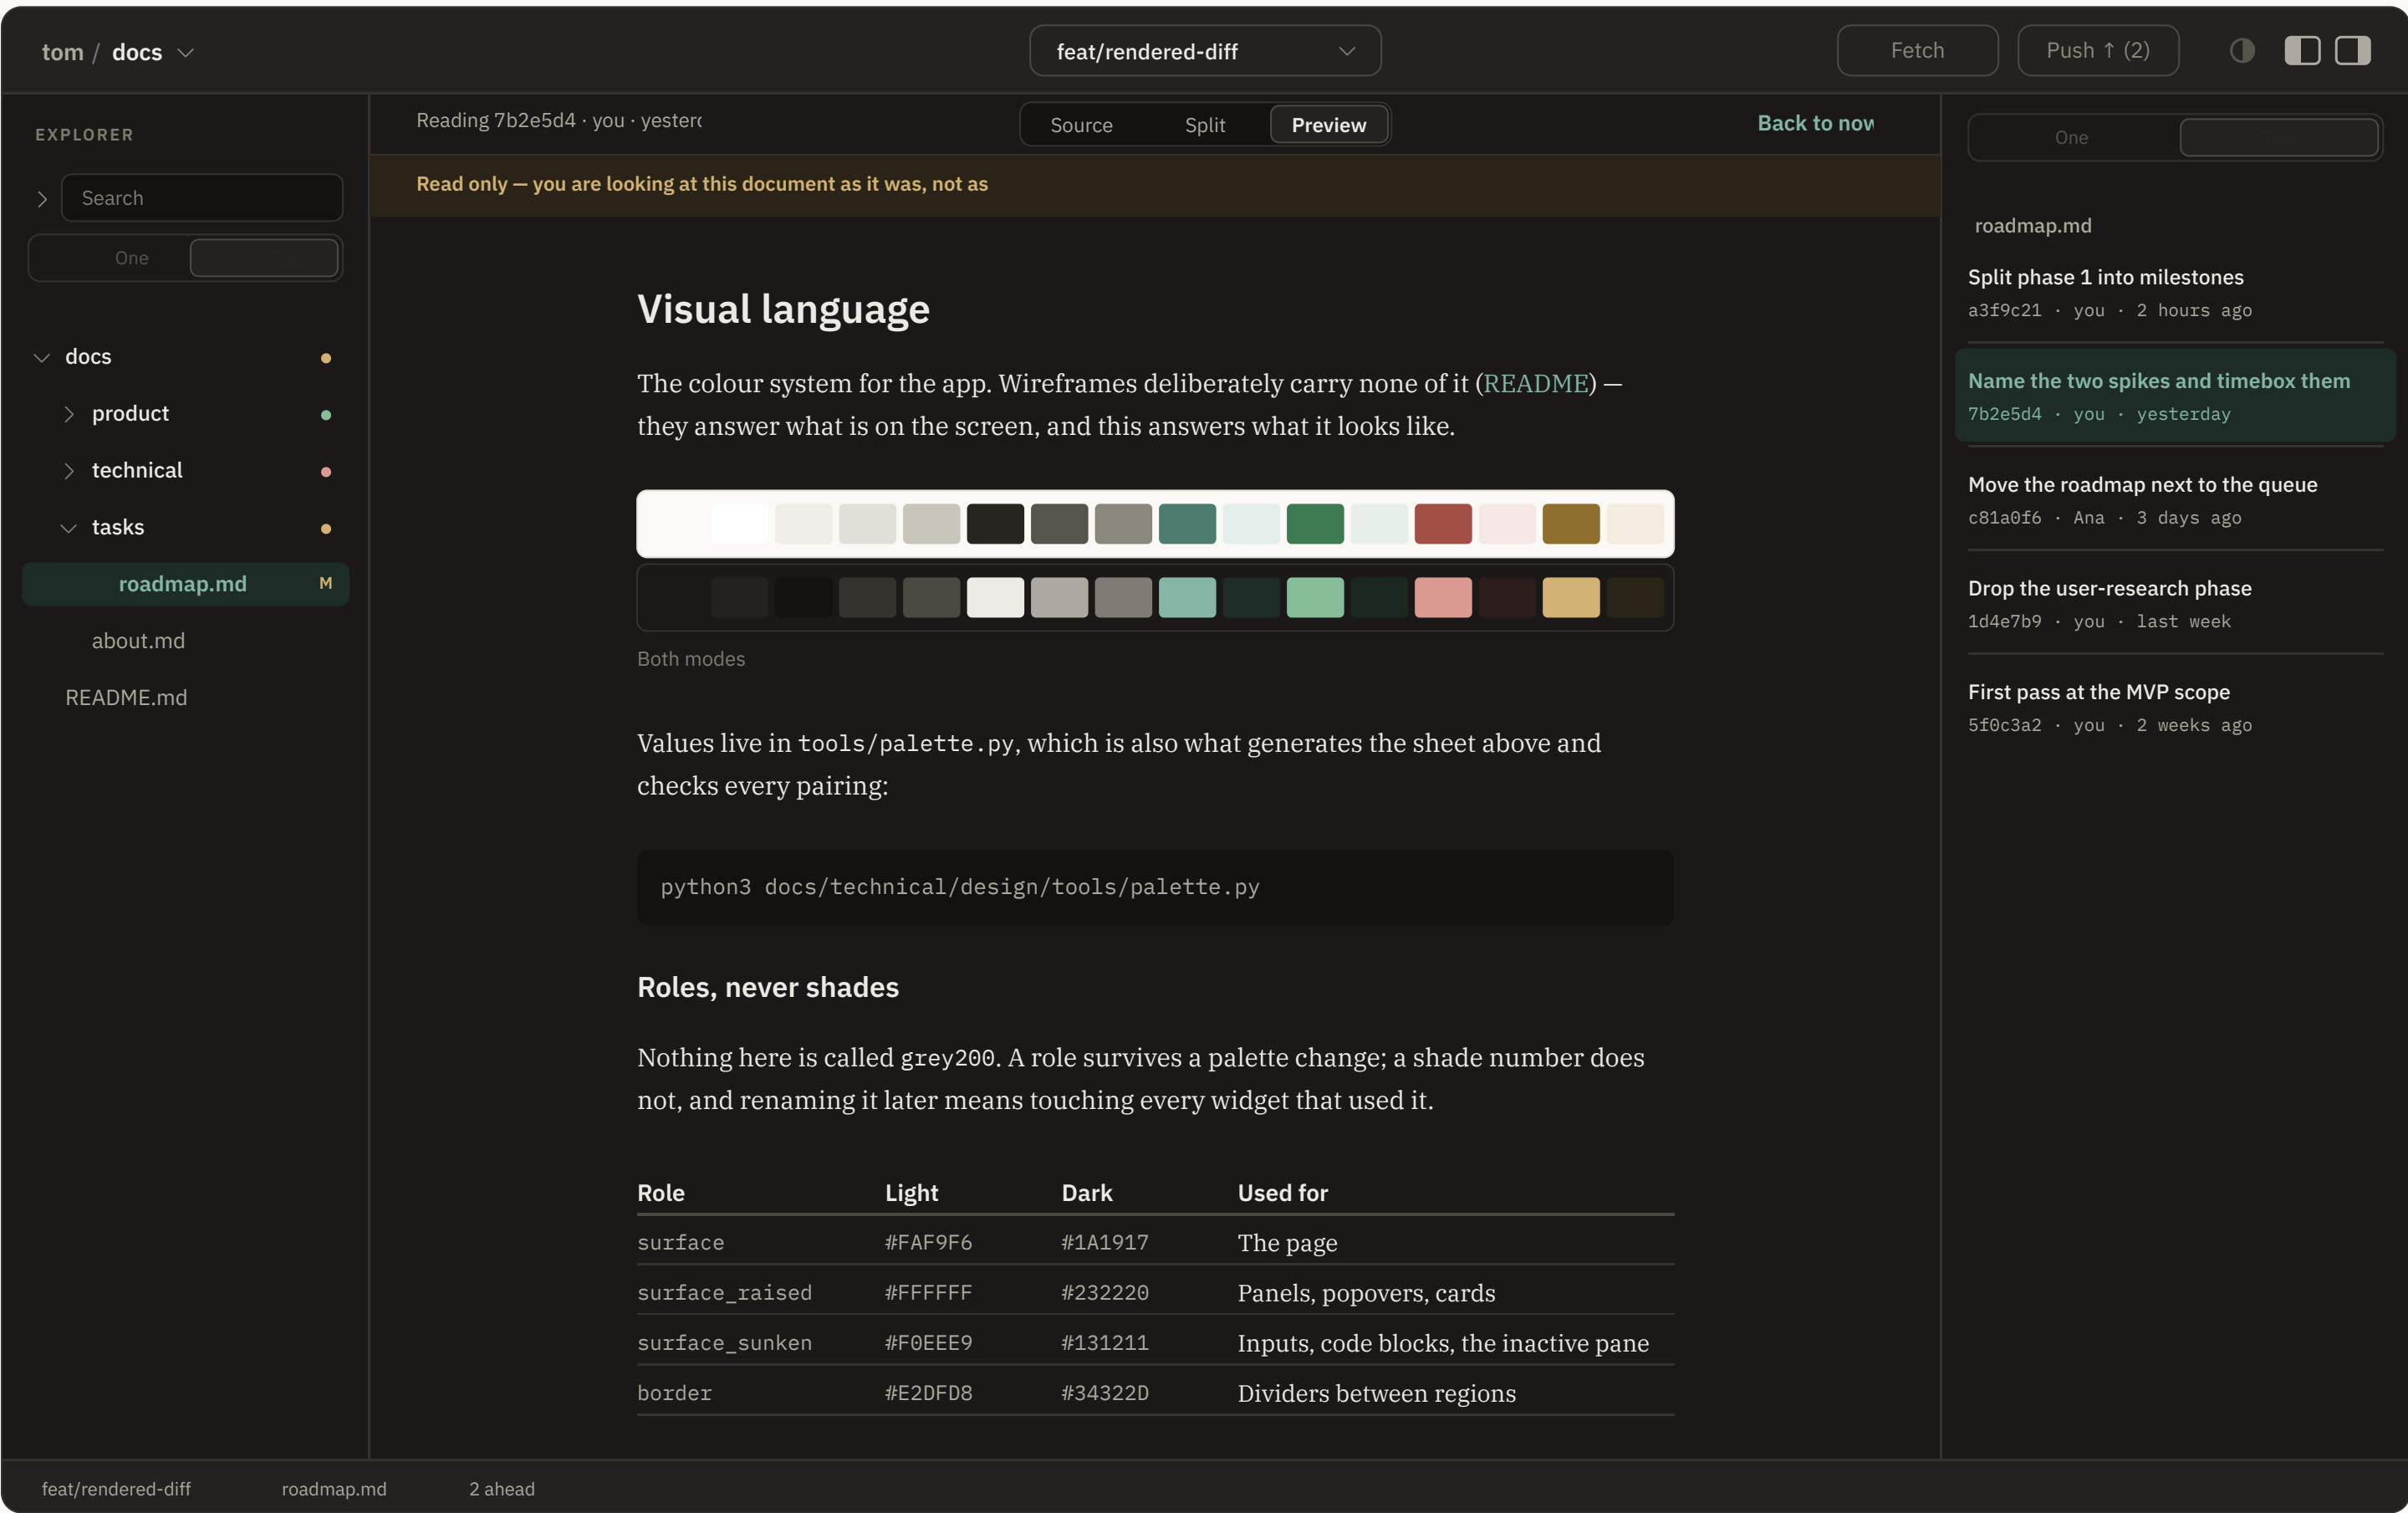

File history

Scoped to this document
Only the commits that changed the open file, newest first.

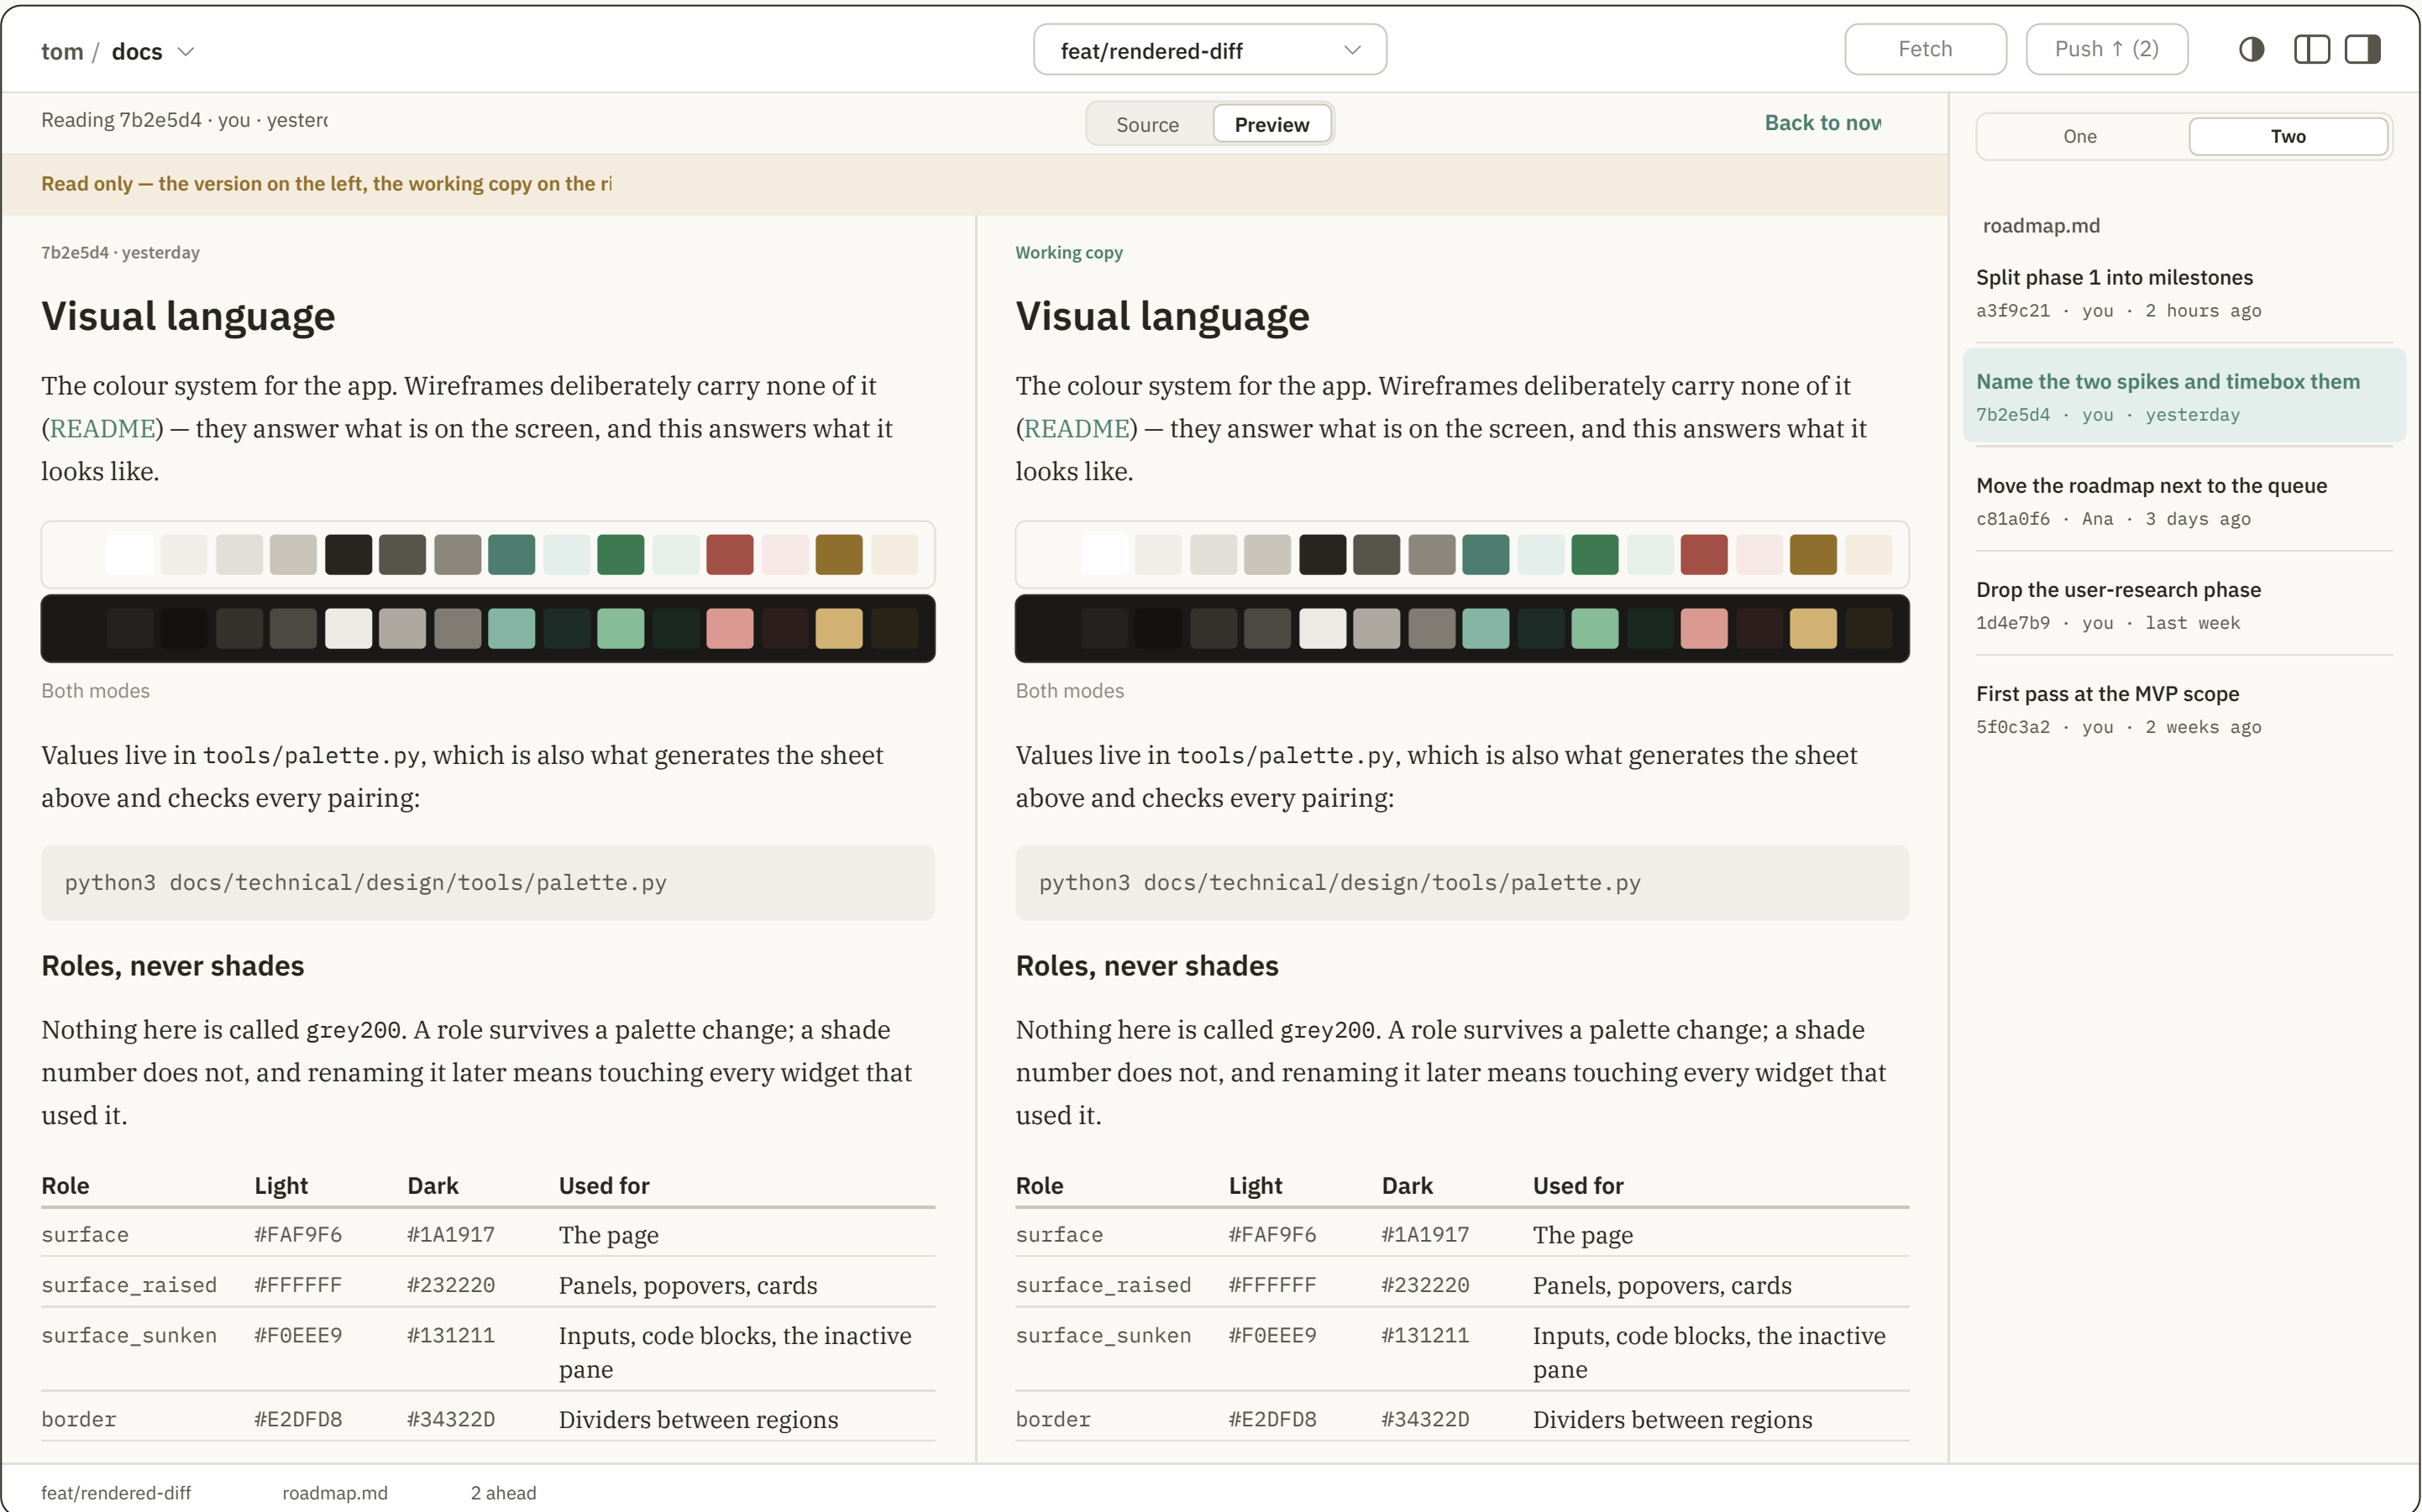

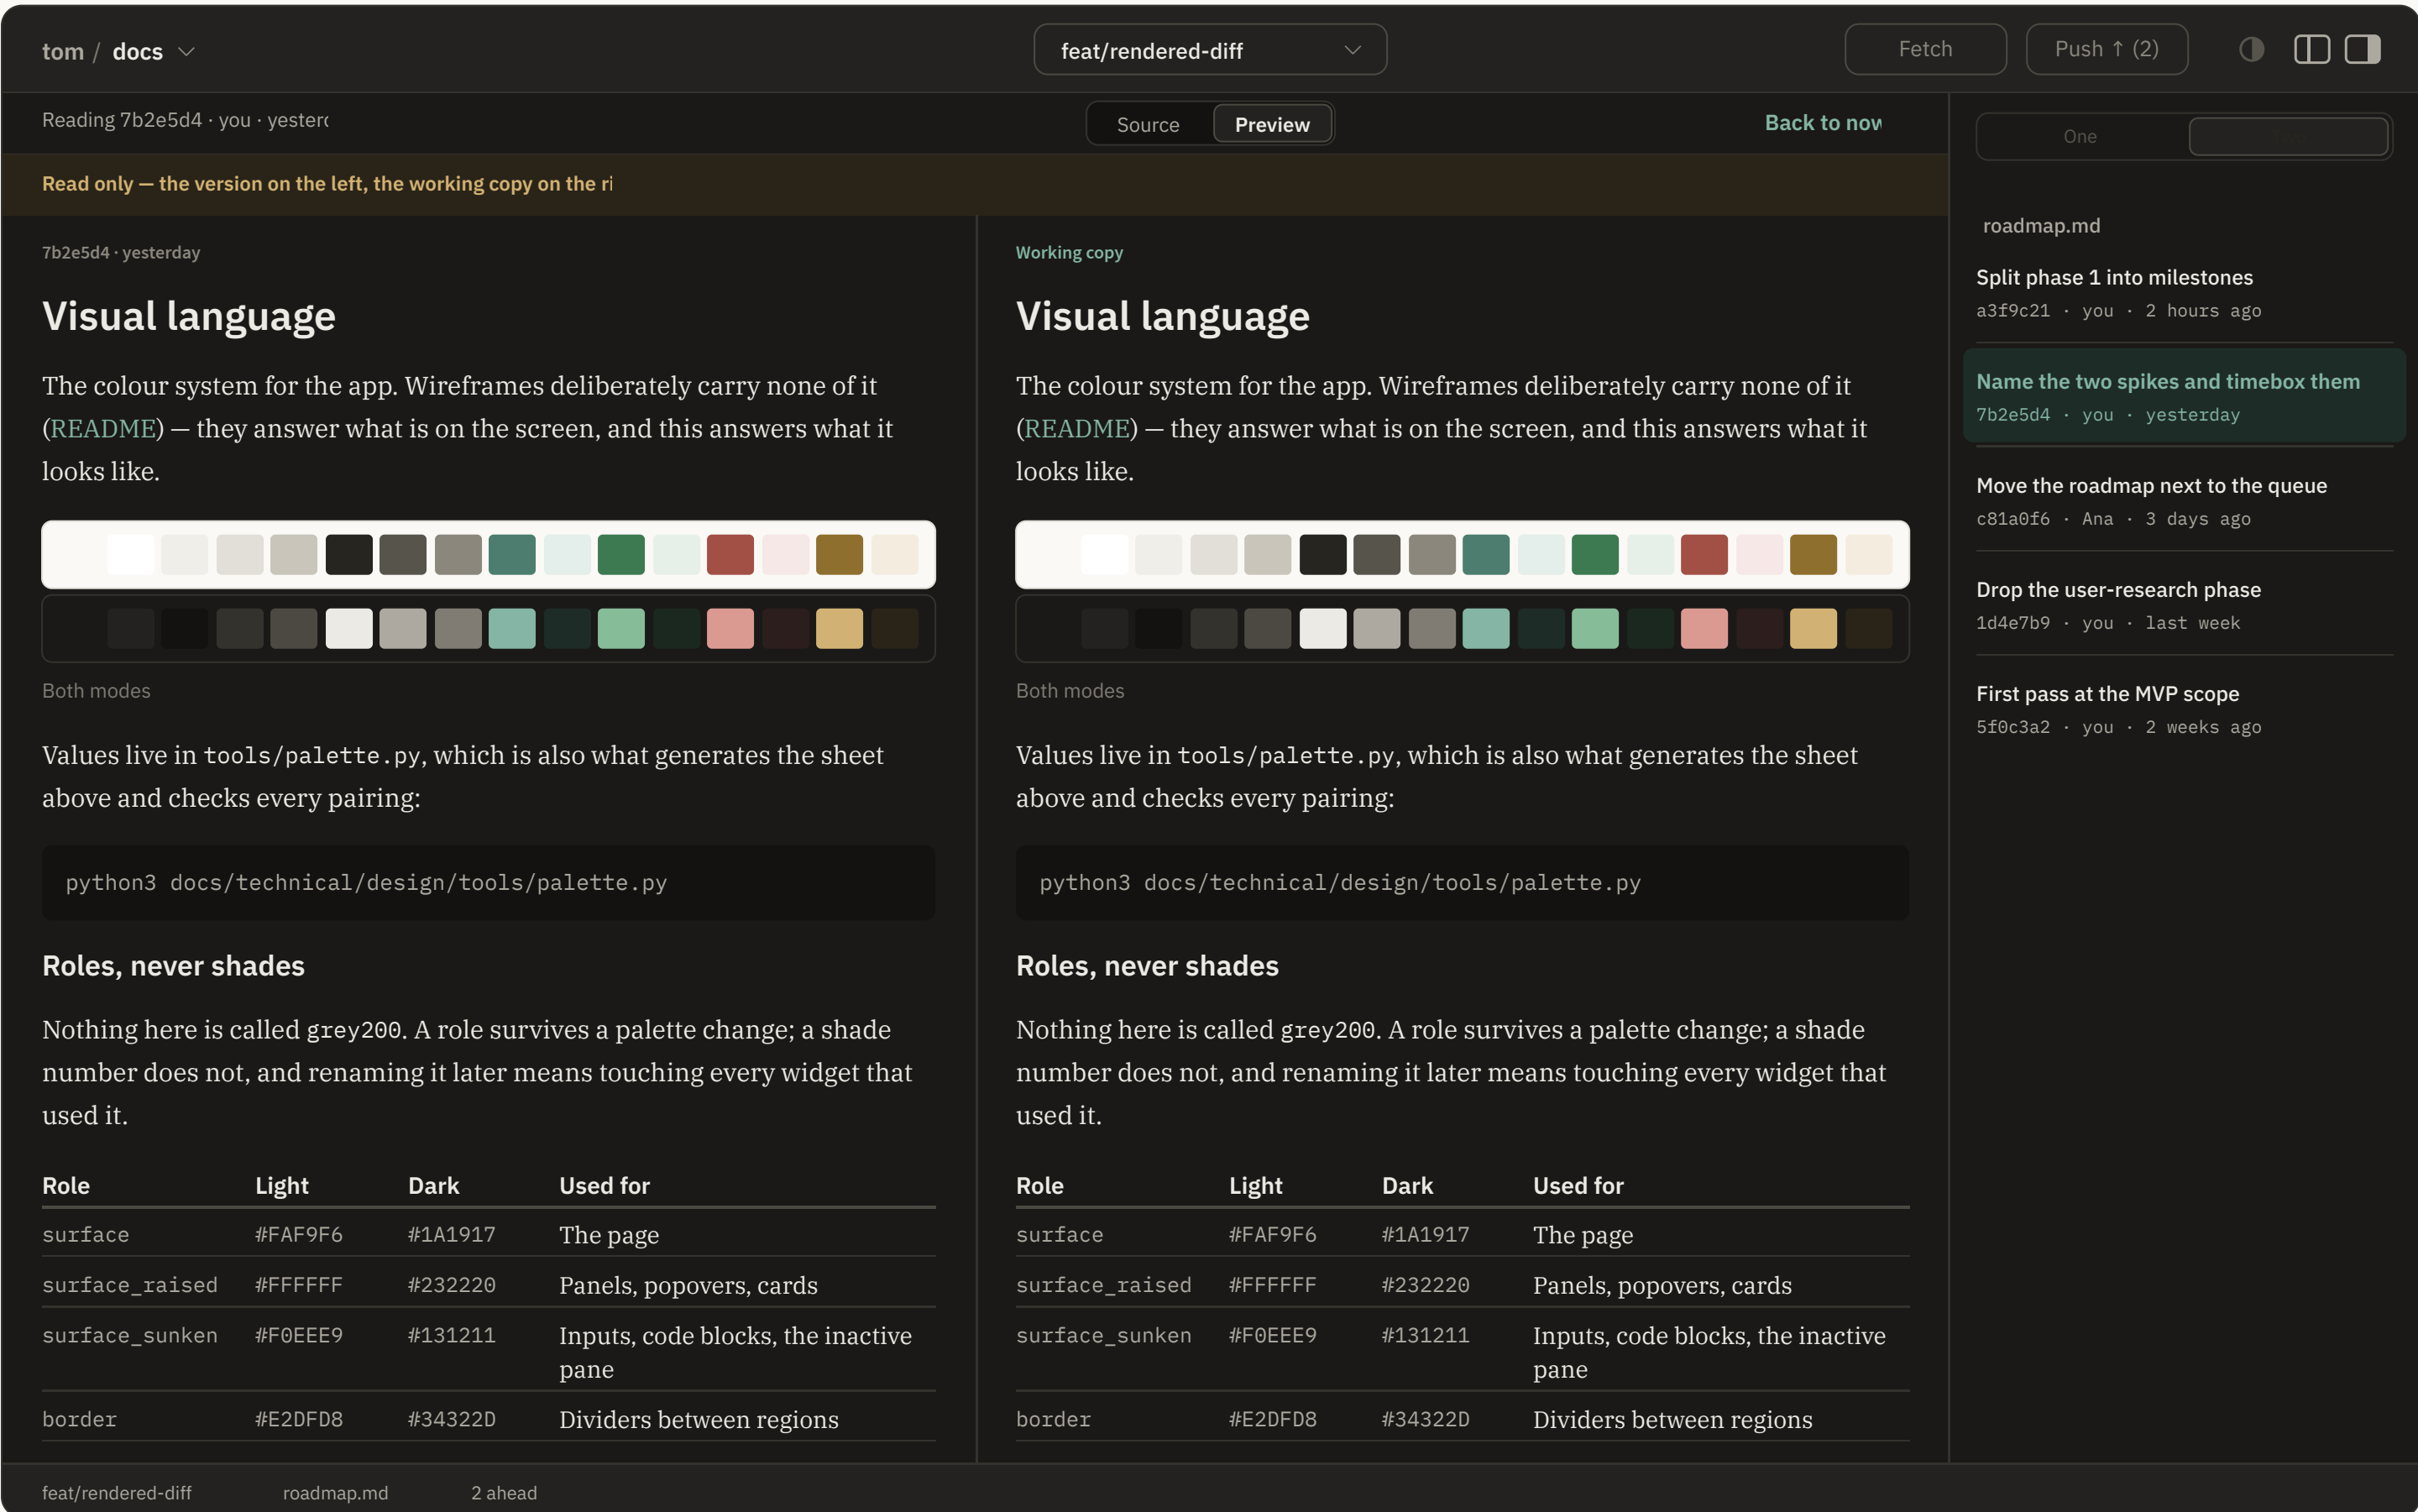

Who, when, and what it was called
Plus the abbreviated sha, the only one of the four that names it elsewhere.

A version opens rendered
Not raw diff text, and never typed into. There is always a way back.

Reading a version

Committing
