

Home

Before a space is open, and the one way opening one fails.

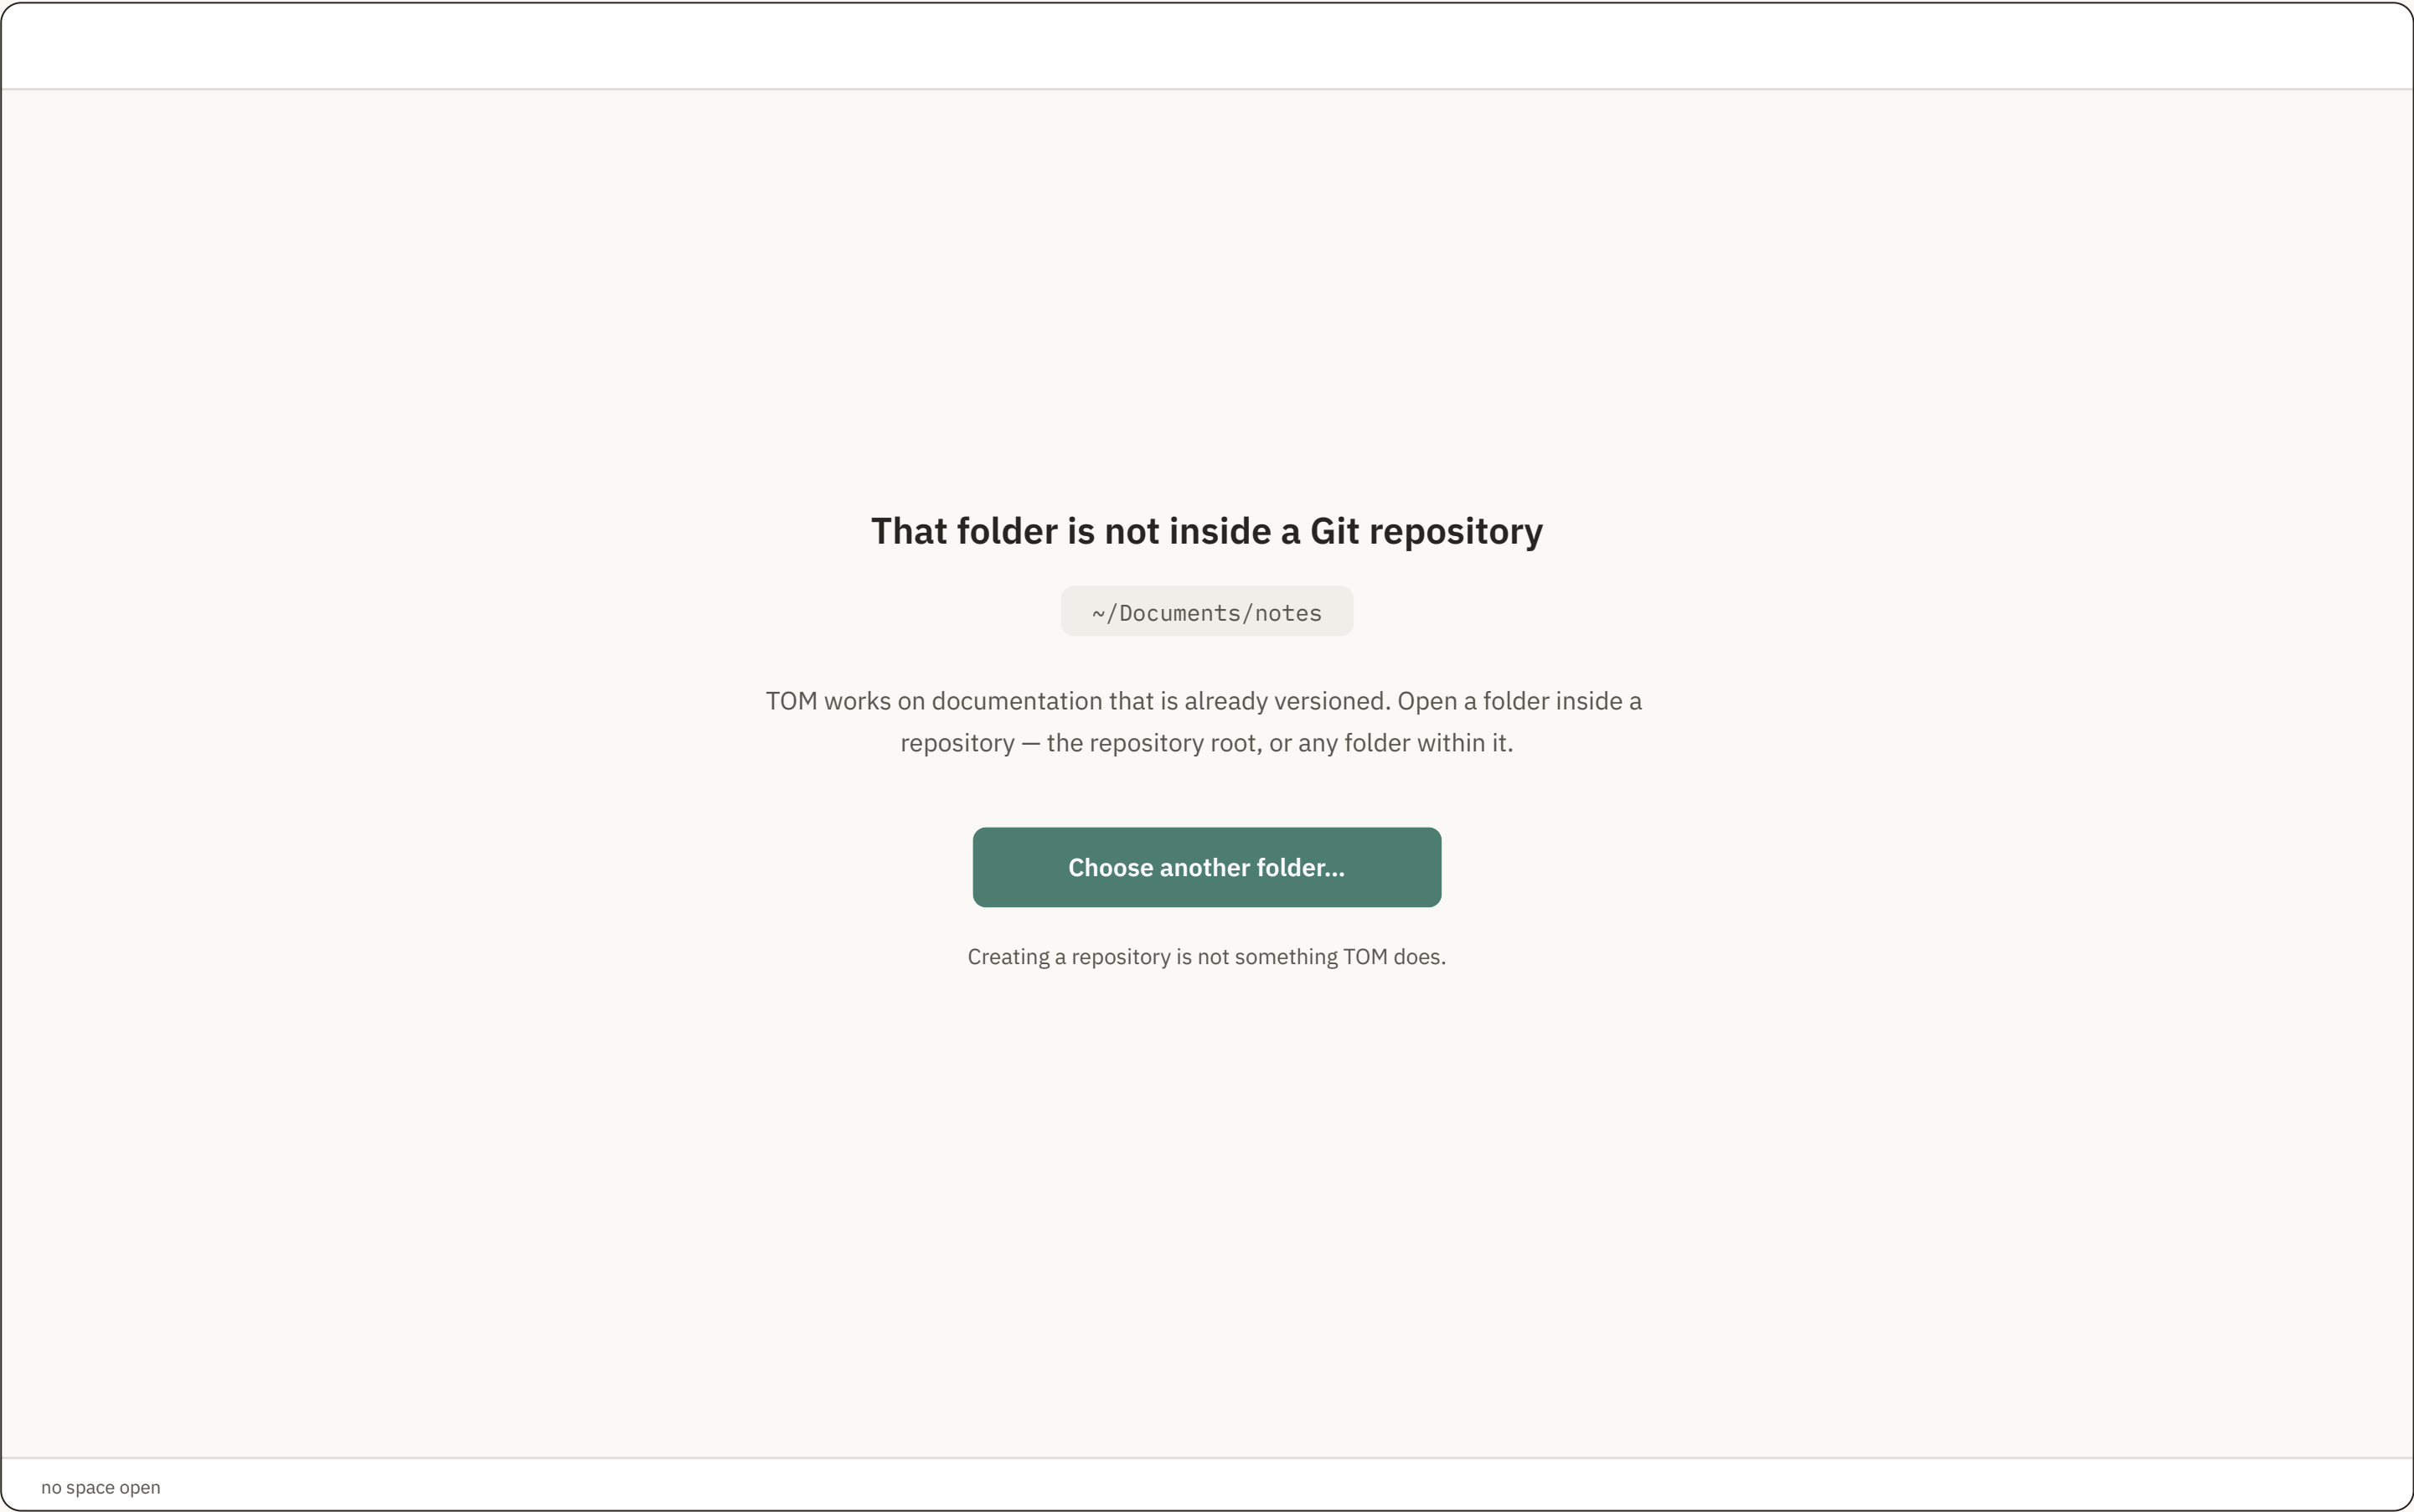

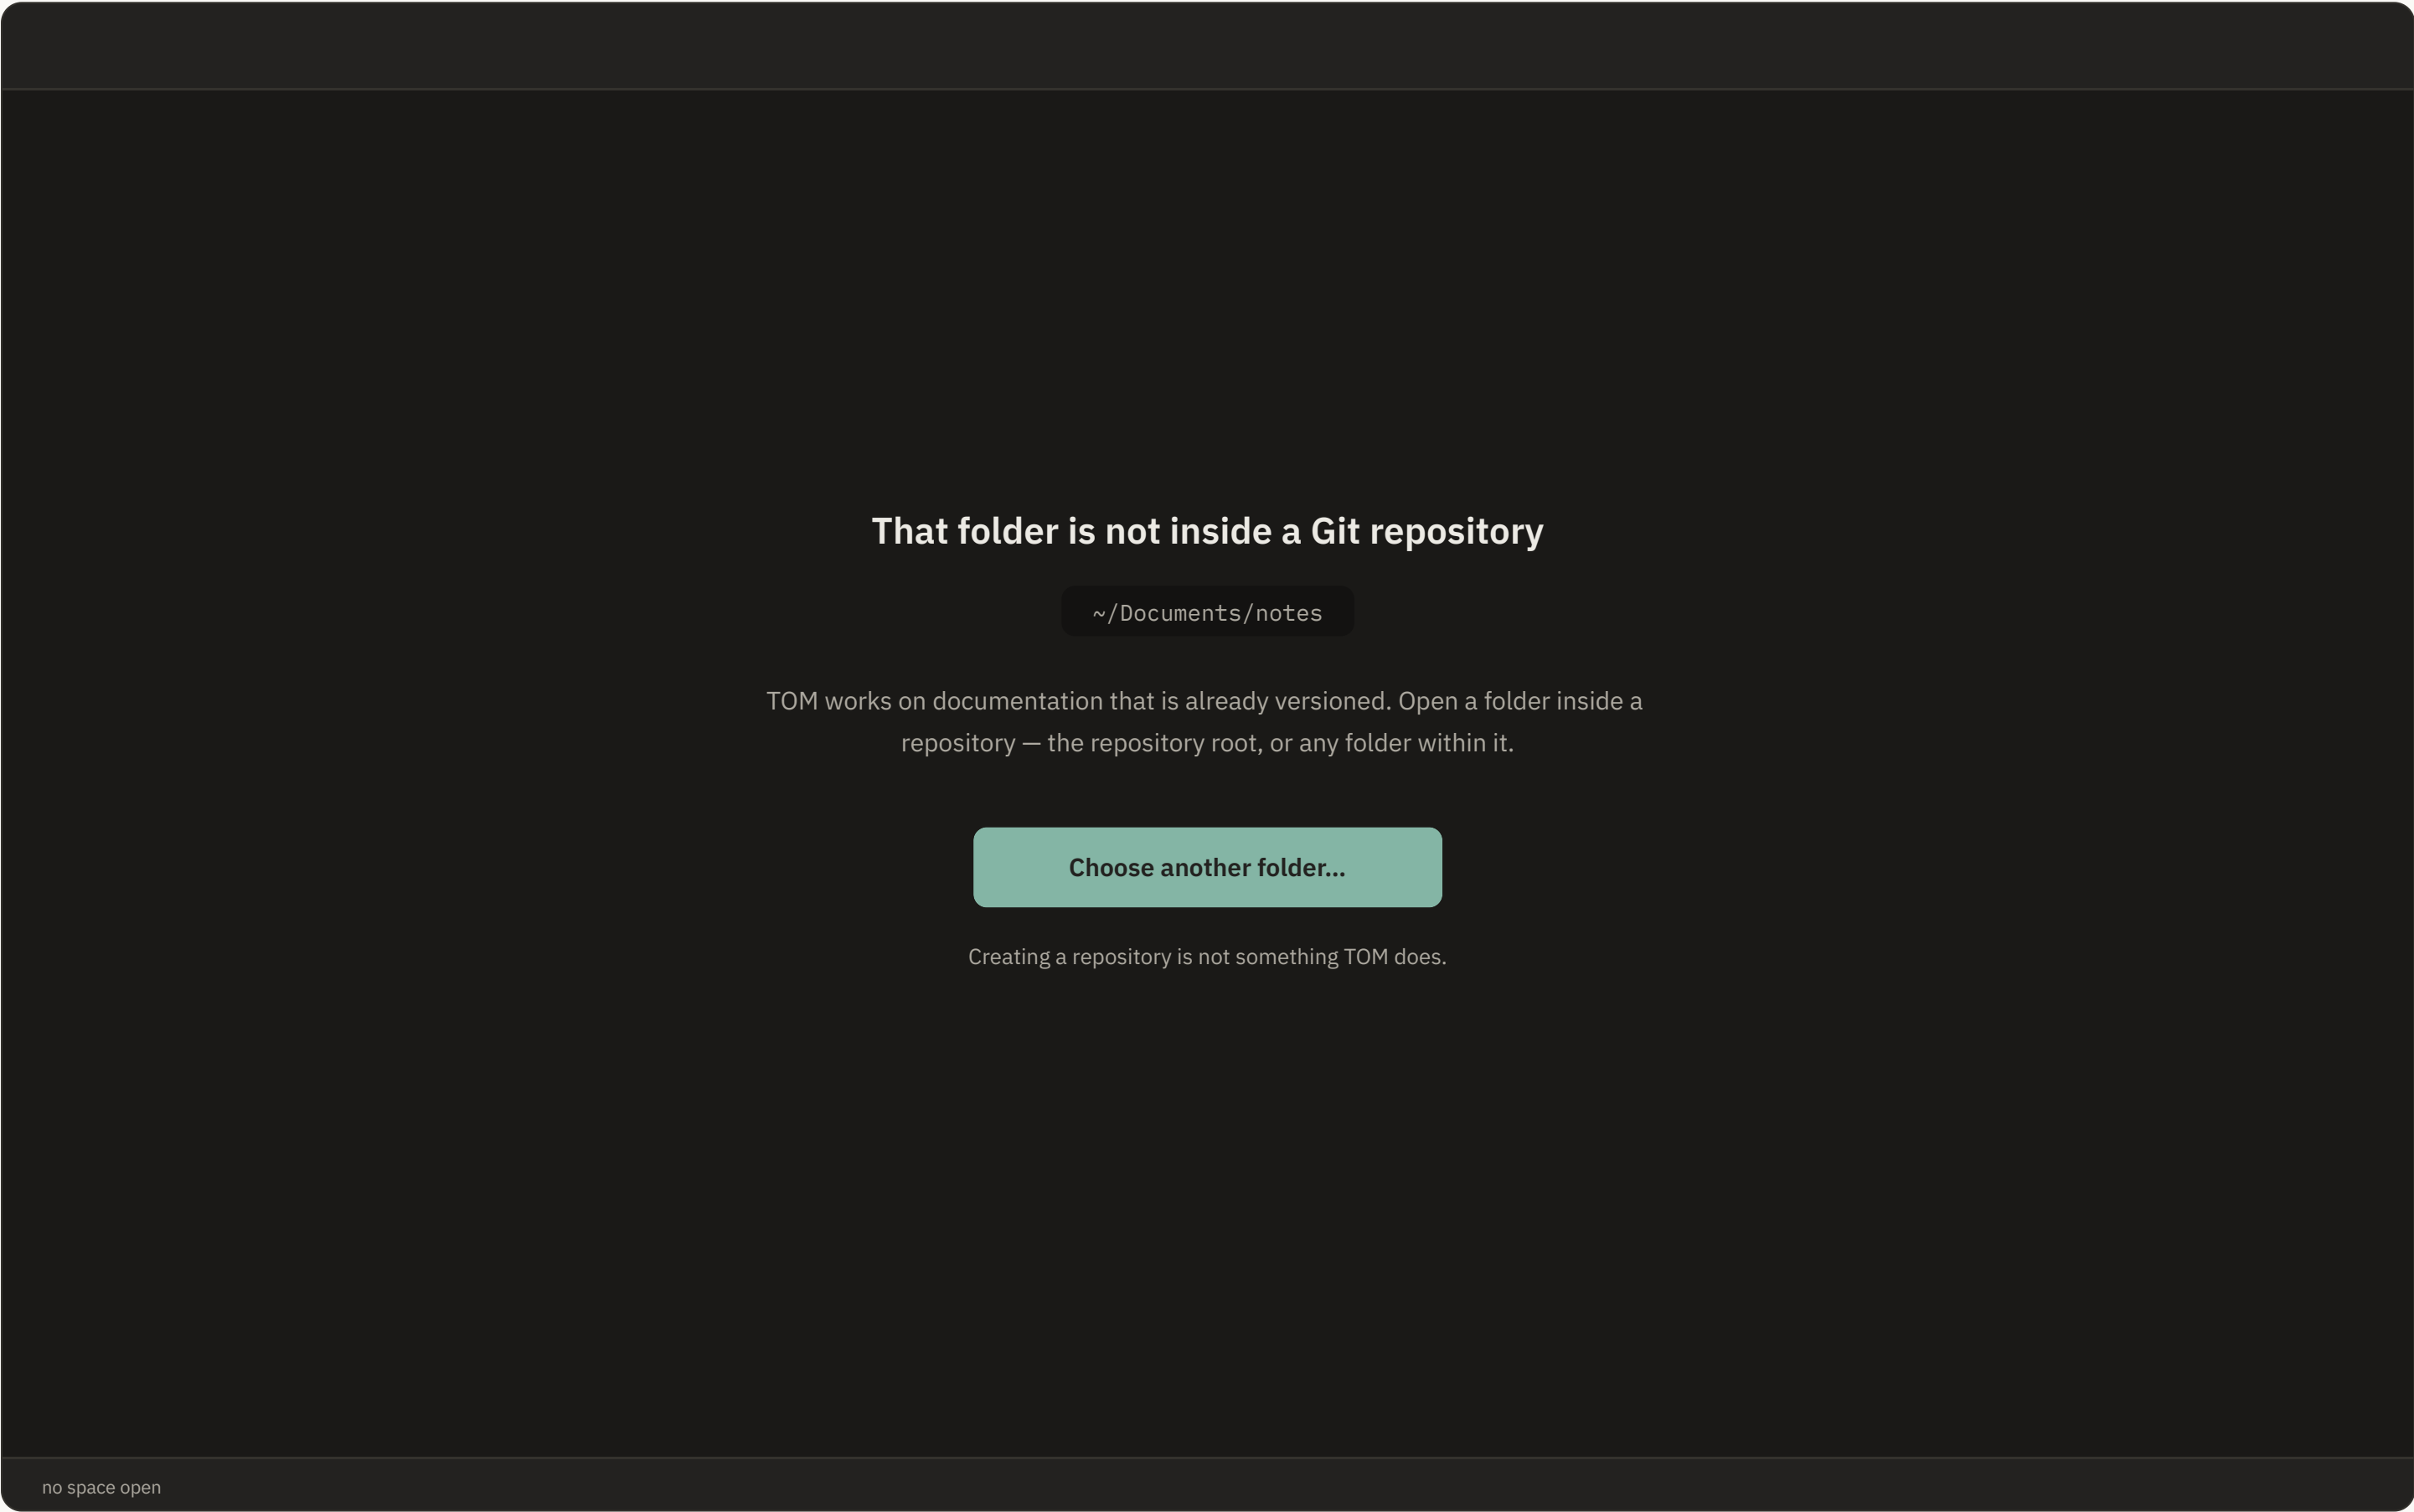

Empty state

Empty state

- Three ways in**
Choose a folder, clone from a URL, or pick a space opened before.
- A space is a folder**
TOM opens a subfolder and still runs Git against the repository above it.
- Coming back is one click**
Recently opened spaces are offered here.

Not a Git repository

Not a Git repository

- A named failure**
Not a crash and not a silent limited mode: the folder is named and the reason explained.
- TOM never runs git init**
Creating a repository is not something it does on anyone's behalf.
